From 10:00 p.m. on Saturday, July 17 to 8:00 a.m. on Sunday, July 18, Doyle Drive will be temporarily reduced to one lane in each direction.

During the temporary lane reduction, crews will shift the roadway alignment to the north in order to make room for Highway 1/Highway 101 interchange improvements as part of the Doyle Drive replacement.

Motorists should be aware of the new roadway configuration and use caution in construction zones. Optional trips should be avoided during this lane reduction.

Construction of the Presidio Parkway has been carefully planned to allow mainline traffic to flow during construction of the new roadway. The short term lane reduction and shifting of Highway 101 lanes to the north will allow traffic to continue moving while the future Presidio Parkway is built.

Please call our project information line at (415) 263-5953 or visit www.PresidioParkway.org/neighbors for up-to-date information regarding night work.
The replacement of Doyle Drive with the Presidio Parkway is a collaborative effort led by the California Department of Transportation, the San Francisco County Transportation Authority, and the Federal Highway Administration. Doyle Drive is structurally and seismically deficient and must be replaced. The roadway is facing the same problem that threatens other crucial components of the nation’s infrastructure — the ravages of time and continual use. Originally built in 1936, Doyle Drive has reached the end of its useful life. The Presidio Parkway is based on a world-class design that will improve the seismic, structural and traffic safety of the roadway. It will be more sensitive to community needs and to the national park setting, reducing impacts on biological, cultural, historical and natural resources and on the surrounding neighborhoods.

Highlights of the new design include:

- A parkway with two sets of short tunnels, a wide landscaped median, traffic calming transitions to city streets and the inclusion of safety shoulders
- A spectacular regional gateway that respects the natural contours of the surrounding area and complements the unique environment of San Francisco and the Presidio, a national park
- New direct access to the Presidio and enhanced views
- A more centralized location for transit connections
- Enhanced pedestrian connections within the Presidio to the Main Post, Crissy Marsh, the National Cemetery and historic batteries
- Reduced light and noise intrusion at Crissy Field.

Construction of the Doyle Drive replacement, the Presidio Parkway, began in December 2009, more than a year ahead of schedule, due to $122 million from the American Recovery and Reinvestment Act of 2009. Construction of the new roadway will take approximately four years to complete and has been planned in two major phases in order to keep traffic flowing during the replacement. Seismic safety will be achieved in late 2011 after the completion of the first phase.

The expected completion date for construction is late 2013 and will be followed by an extensive landscaping program in 2014. An ongoing series of advisories will update the public about what to expect as work progresses.
